FESCO Energy hires a critical senior level project/construction manager to work on the implementation of energy resiliency and efficiency projects

Frederick, MD, May 30, 2019 – FESCO Energy (“FESCO” or the “Company”), is pleased to welcome Ms. Judy Madsen to its management team. Ms. Madsen has over 25 years of experience in project and construction management experience in the energy field working for large energy companies and directly for the federal government.

Her skill set includes successfully project managing over \$200 million of Energy Savings Performance Contracts for school districts in Maryland and federal customers in the Mid-Atlantic Region. Ms. Madsen is responsible for the internal management and individual project execution of critical energy projects for various customer market verticals on a national basis.

Ms. Madsen will be able to utilize FESCO’s market position as a provider of Guaranteed Energy Savings Projects, and classification as a Limited Disadvantaged Business Enterprise, total small business, and Alaskan Native Corporation 8(a) JV to assist customers develop and construct energy projects and attain their small business credits.

Judy is the third of seven new employees expected to start in 2019 and I am extremely pleased that she has joined the team. I was most impressed with Judy’s vision of how to integrate her experience as a federal employee charged with the development and execution of complex projects into FESCO’s DNA of project safety, accountability and quality. I am confident her approach will enhance our CM/PM teams capability to deliver on our promise of “Customer to the Core”™, said John Dukes, President.

About FESCO Energy

FESCO Energy is complete turnkey provider of energy supply, demand, conservation and resiliency projects managed by an executive team with over 80 combined years of proven experience. Based in Frederick, Maryland, FESCO develops and implements distributed and renewable power generation, energy and water efficiency, smart micro-grids, cyber secure power management and commodity supply for Federal, educational, public sector, commercial, and industrial customers. It helps customers develop electricity and natural gas cost-of-service analysis and advises on rate designs using a cloud-based analytics platform that ensures the right rate based on customer usage patterns.
